正在变化中计算模式

- PC计算模式实现的是“个人生产”
 - 利用固定的硬件设备和软件平台的来实现
- 移动计算模式实现的是“个人自由”
 - 为消费者量身定做的软件平台和硬件终端
 - 消费者任何时间、任何地点 都能够掌握自己的数据
- 多色多样的终端将不会融合到仅一个平台
- 但唯有软件才能帮助消费者在不同终端上有一致的用户体验
- 软件的分发，开源的软件和Web 2.0 正在领导着互联设备的开发方向

基于移动互联网的Web 2.0

- It is not squeezing into a smaller screen
 - It's not about a smaller laptop experience
 - It's not about just "browsing"
- Adding mobility to a truly personal device
 - Always on, always with you
 - Location and Context
 - "The Personal Internet" or "Social Location"
- Mashing of data & device information
 - Application get data from multiple sources
 - Ubiquitous data access from multiple devices
- Applications developed using web-based standards
 - HTML5, CSS, and JavaScript
 - Email client will indicate if addressee is available on IM

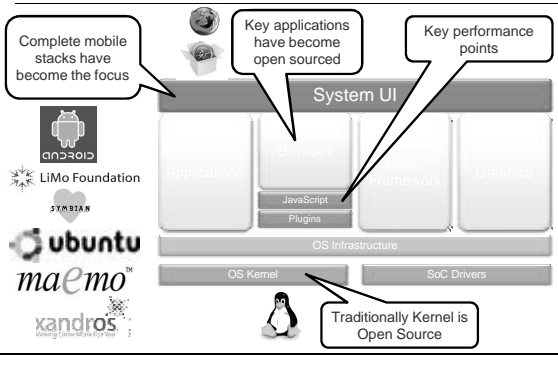

Palm® Pre™

如何在互联设备上实现网页浏览

利用开源软件实现移动互联Web 2.0

Complete mobile stacks have become the focus

Key applications have become open sourced

Key performance points

System UI

Applications

Browser

JavaScript Plugins

OS Infrastructure

OS Kernel

SoC Drivers

Traditionally Kernel is Open Source

Logos: Android, LiMo Foundation, SYMBIAN, ubuntu, maemo, xandros

JavaScript: 实现Web 2.0的编程语言

- JavaScript is the main programming language of Web 2.0
 - Originally designed for simple web page animation
 - Now the underlying technology of the programmable web
 - Much more JavaScript software now runs in the browser
 - Less round trips to the server- reduced page fetches
 - Faster web experience (and now even faster through JITs)
 - Integration with on-device peripherals through W3C standards
- Example Rich Internet Applications in JavaScript
 - Adobe Flex
 - Google GWT
 - Open Laszlo

互联设备的软件生态系统

基于ARM的Android平台

- ARM is a member of the Open Handset Alliance
 - Contributed OpenMaxDL for ARMv6 and NEON
- Android Platform
 - A complete platform for mobile product development
 - Large support available from the ARM Partnership
 - ARM is the leading platform for shipping products
- ARM support for Android
 - Engineering work to prove Android on latest ARM processors
 - Identify code optimizations for ARM processors
 - Contribute back to Open Handset Alliance
- Planned optimizations for 2009
 - NEON and VFP library optimizations (2D, Skia and math libraries)
 - Dalvick acceleration and JIT support
 - Webkit optimizations

Ubuntu的ARM套件

- Ubuntu 9.04 Now Available on ARM
 - <https://edge.launchpad.net/ubuntu/jauntu>
 - Supports Freescale i.MX51 based on the Cortex-A8 processor
- ARM Optimizations
 - ARMv5 (tuned to cortex-A8) with VFP
 - Linux kernel supports ARMv7 CPU features
 - Enable hard floating point support
- Desktop Edition Features
 - Gnome based desktop UI, internationalisation and accessibility
 - Open Office suite including support for word processing, presentations and spreadsheets
 - Support for web browsers (incl. Mozilla, Webkit etc.)
 - Large pool of applications

针对Web 2.0应用的软件优化

- Mozilla Firefox support for ARM
 - Available as part of Ubuntu 9.04
 - Current release supports ARM Javascript optimizations
 - ARM JIT support becomes final in Firefox 3.5
 - Future releases are targeting Open GLES 2.0
 - Reference implementations for ARM also on Linux.onarm.com
 - Mozilla Fennec browser interface for mobile devices later this year
- Open JDK
 - ARM optimized VM available as part of Ubuntu 9.04
 - Optimizing VM using new template interpreter for browser Java Applets for September, 2009

基于ARM优化的Adobe Flash 10 播放器

- ARM is working with Adobe to optimize Flash Player for ARM
- ARM optimizations will be made available through Adobe
- On track for early support on ARM Q4'09 (limited platforms)

ARMv6 SIMD optimizations for Software Renderer
 Open GLES 2.0 for Hardware Rendering for VGA and above (e.g. Mali)
 ARM Optimized Codec Support from Adobe and Codec Partners
 Tamarin Nano-JIT optimizations for ARM
 Increased script performance with smaller memory footprint, lower power

Samsung 9系列电视和Nokia N97手机

- Widget user experience
 - Highlights the information you care about
 - You no longer "browse" the information the information is there when you need it
 - Automatic updating of widgets

小结

- 开源嵌入式软件是下一代差异化计算平台的理想选择

- 软件的创新：利用Web技术为消费者在不同的互联终端上享受一致的用户体验
 - 真正地实现任何时间、任何地点、任何终端的“普适计算”
 - 未来的Web2.0将远远超过今天的网页浏览
- 开源软件是一个富有生命力的软件生态系统和社区
 - 大量的基于ARM平台的软件创新为消费者提供所喜欢的体验
 - 越来越多的公司正在提供商业化的技术支持
